Welcome to the Global Health Cost-Effectiveness Analysis Registry

Funded by a grant from the Bill and Melinda Gates Foundation, [The Center for the Evaluation of Value and Risk in Health \(CEVR\)](#) at Tufts Medical Center created the CEVR Global Health CEA (GH CEA) registry, a database of cost-effectiveness analysis (CEA) studies that evaluate health interventions from around the world. The Global Health CEA registry focuses on those interventions designed to mitigate disease burden in countries at various stages of industrial development.

The Global Health Cost Effectiveness Analysis (GH CEA) Registry is a free database that compiles research literature on the economic value of global health interventions. Our inclusion criterion for contributing articles is contingent on its application of the “cost-per-DALY-averted” metric, which measures the cost-effectiveness of an intervention.

The GH CEA Registry is a repository of all peer-reviewed cost-per-DALY studies stratified by methods, cost-per-DALY ratios, and disability weights published since the 1990s.

Global health organizations acknowledge the importance of prioritizing limited health care resources, but the question remains: are we spending our money wisely? Cost-effectiveness analysis can help stakeholders gain a better understanding of the return on investment of global health interventions and has the potential to inform smart investments and maximize the impact on population health.

Methods

- Global Burden of Disease Classification & ICD-10
- Primary, Secondary & Tertiary Prevention Classification
- Funding Source
- Study Perspective

Cost-Per-DALY Ratios

- Target Population
- Intervention & Comparator

Agenda

1. Prioritizing resources for health
2. State of global health cost-effectiveness analysis
3. Using CEA
4. What makes a good study
5. Summary

Summary

- ☒ CEA literature in global health continues to grow
- ☒ CEA should keep pace with shifts in disease burden
- ☒ Need to improve study quality and adherence to reference case
- ☒ Policy should consider geography and context-relevant studies

Future directions for GH CEA Registry

Include studies with other outcomes

Transfer results between settings

Develop ICER prediction models

Expand Registry beyond published literature

Automate study screening and data extraction

Discussion:

**“No UHC without...
evidence of value
for money”**

Kalipso Chalkidou, MD, PhD

Director, Global Health Policy and Senior Fellow, CGD

Professor of Practice in Global Health, Imperial College London

Lead, international Decision Support Initiative

A few thoughts

Transition from aid is a reality and is putting serious pressures on healthcare budgets alongside political commitments to UHC, the rise of chronic disease and comorbidities and technological innovation.

Aggregated regional lists of Best Buys are a useful start but contextualization is needed to inform investment (or disinvestment decisions): this is why the Tufts Registry is of such great value.

A standardized and fit-for-purpose approach to economic evaluation is of the essence for evidence of efficiency and distribution to be useful to policy makers locally. This includes:

- a locally relevant methods agenda
- decision rules reflecting local opportunity costs

Institutionalising evidence informed, accountable priority setting is not an optional extra in the journey towards UHC

The Tufts registry is a global public good worth supporting alongside other similar initiatives such as the repository of open access CEA models.

Transition from aid is for real...

Table 11. Countries at High Fiscal Risk from Global Health Transitions, 2015-2040

Appropriate discount rates
for fast growing economies:
do we borrow the US/EU
rates?

Appropriate outcome
measure: is the DALY still
relevant in LMICs?

How can economic returns
to health investments be
credible to Treasuries

- eg productivity vs survival
gains/consumption losses,
monetisation of health outcomes,
unrealistic fiscal gains

What is the right
perspective (social vs
healthcare sector)?

What is cost effective AND
affordable?

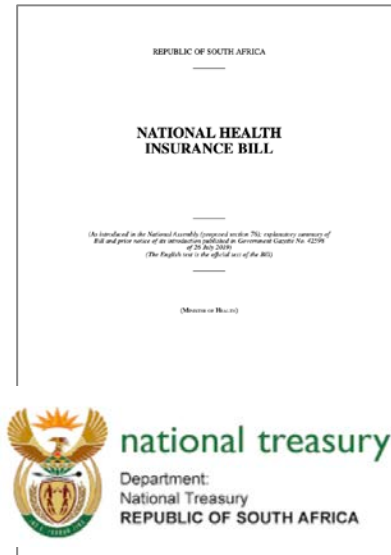

Institutionalisation of HTA: national governments forging ahead

National Health Insurance Act of 2013, Section 11- Excluded Personal Health Services
“The Corporation shall not cover expenses for health services which the Corporation and the DOH consider cost-ineffective through health technology assessment...”

国家卫生计生委卫生发展研究中心
China National Health Development Research Center

(4) Treatment must not be funded if a health care service provider demonstrates that— (a) no medical necessity exists for the health care service in question; (b) **no cost-effective intervention exists for the health care service as determined by a health technology assessment**; or (c) the health care product or treatment is not included in the Formulary, except in circumstances where a complementary list has been approved by the Minister

Minister of Health's Decree No. 71 /2013 Article 34

(5)Health Technology Assessment Committee **provide policy recommendation to the Minister on the feasibility of the health service as referred to in paragraph (4) to be included as benefit package of National Health Insurance**

“the India Medical Technology Assessment Board for evaluation and appropriateness and cost effectiveness of the available and new Health Technologies in India...**standardized cost effective interventions that will reduce the cost and variations in care, expenditure on medical equipment...overall cost of treatment, reduction in out of pocket expenditure of patients...**”.
